

Indicator #1: Non-fatal Work-related Injuries and Illnesses Reported by Employers

Maryland State Occupational Health Indicators

About this Indicator:

Why is this Indicator Important?

Estimating the burden and tracking these injuries can help target prevention programs and activities. This information can be used to identify contributory factors and to develop prevention strategies or regulations to protect workers.

Limitation of Indicator:

The Survey of Occupational Injuries and Illnesses is conducted by the Bureau of Labor Statistics using a probability sample and not a census of all employers. It is based on injury and illness data reported by employers and is subject to sampling error. Military, self-employed individuals, farms with fewer than 11 employees, and Federal agencies are excluded from the survey.

For more information on this indicator or occupational health in Maryland, visit the DHMH website.

- Work-related injuries usually result from a single event, such as a fall, while work-related illnesses, such as asthma or asbestosis occur as the result of a longer-term exposure to a hazardous chemical, physical hazard or repeated stress or strain at work.

Work-related injuries and illnesses are preventable, and control of occupational hazards is the most effective means of prevention.

Indicator #1: Non-fatal work-related injuries and illnesses reported by employers, Maryland

	1. All Cases of Work-Related Injury and Illness		2. Work-Related Injury and Illness Cases Involving Days Away from Work		3. Work-Related Injury and Illness Cases Involving more than 10 Days Away from Work	
Year	Number	Rate*	Number	Rate*	Number	Rate*
